

COATING THICKNESS ANALYZER

The Coating Thickness Analyzer offers advanced solutions for analyzing coating thickness in diverse industries, ensuring products meet stringent quality standards. With its top-down analysis approach, incorporating cutting-edge technologies like the Multi-FP algorithm and microlight aggregation, it delivers swift, precise, and non-destructive testing even on uneven or irregular surfaces.

This essential tool addresses challenges in controlling product quality during surface treatment processes and is indispensable for industries ranging from jewelry and automotive to aerospace and electronics.
