

PULMONARY AEROSOLIZER

Pulmonary aerosolizers and dry powder insufflators are devices designed to deliver precise and measured aerosol samples directly into the trachea of rodents, enabling accurate drug delivery to the lungs. The operation table securely holds rats and mice in various positions to enhance procedure efficiency. The rodent laryngoscope allows for quick, minimally invasive insertion into the mouth and trachea, with controlled insertion depth. These tools are suitable for quantitative lung drug delivery in mice, rats, and guinea pigs.

APPLICATIONS

Pulmonary Aerosolizer
Pulmonary Aerosolizer

Pulmonary Aerosolizer
Pulmonary Dry Powder Insufflator

Pulmonary Aerosolizer

Pulmonary Aerosolizer

Application

- 1. Inhalation Therapy
- 2. Drug Research

3. Medical Protection

4. Biological and Chemical Hazard Assessment
