

SLIDE TRAY CABINET

Slide Tray Cabinet

A Slide Tray Cabinet is a storage solution designed to organize microscope slides in a structured, easy-to-manage format. Instead of keeping slides in mixed containers or loose storage, the cabinet separates them into dedicated trays so they can be grouped by case, date, department, or method. This makes day-to-day retrieval, slide tracking, and archive control more efficient in routine laboratory use.

ToronMed™'s Slide Tray Cabinet series is built for histology, pathology, research, teaching, and laboratory archive environments that need compact but organized microscope slide storage. The uploaded brochure presents two main configurations: a one-row cabinet for moderate slide capacity and a two-row cabinet for larger-volume storage. Both are designed around tray-based organization, mobility, and practical archive support.

Across the series, the focus is simple physical organization, compact vertical storage, and easier movement within the lab. The cabinets use multiple plastic trays, fixed tray locations, and caster-mounted bases to help users store, sort, and reposition slides more conveniently.

Product Line Up

1. One Row Slide Tray Cabinet - ToronSTC™ 500

One Row Slide Tray Cabinet - ToronSTC™ 500 is a compact Slide Tray Cabinet designed for laboratories that need organized storage without moving to a larger cabinet format. It holds 25 plastic trays, with 20 slides per tray, for a total capacity of 500 slides. This model is well suited for routine storage, smaller archive needs, and labs that want a mobile, space-efficient cabinet.

2. Two Rows Slide Tray Cabinet - ToronSTC™ 1000

Two Rows Slide Tray Cabinet - ToronSTC™ 1000 is the higher-capacity version in the series. It uses a dual-cabinet layout with 50 plastic trays in total, again with 20 slides per tray, for an overall capacity of 1000 slides. This model is a better fit for laboratories that need larger organized slide storage while still keeping the cabinet compact and mobile.

Why Choose ToronSTC™ Series for Your Slide Tray Cabinet?

Practical storage options for different lab sizes

ToronSTC™ Series gives laboratories a choice between moderate-capacity and higher-capacity storage within the same product family. That makes it easier to match the cabinet to actual slide volume, archive habits, and available floor space.

Built for organized slide archiving

Both cabinet models are designed around tray-based organization rather than open storage. This helps users sort slides into smaller groups for easier retrieval, better archive control, and cleaner day-to-day handling.

Compact vertical design

The ToronSTC™ series is designed to provide useful slide capacity without taking up unnecessary floor space. That makes the cabinets practical for pathology and histology labs where storage must stay organized but space is often limited.

Mobile cabinet format

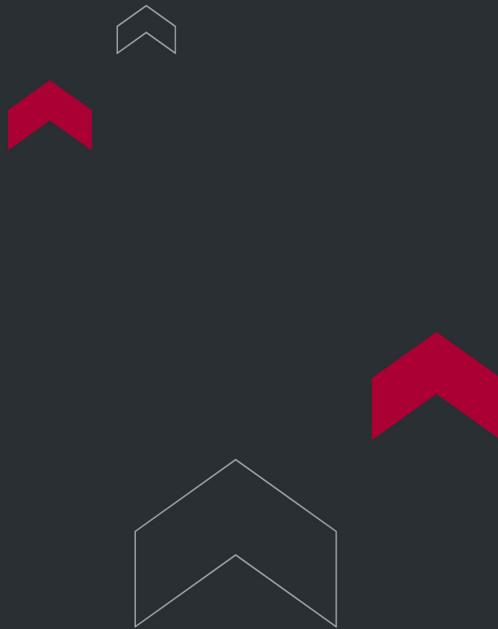

Both models use a wheeled base, which makes repositioning easier inside the laboratory. The ToronSTC™ 1000 also includes lockable wheels for more stable placement after movement. This adds flexibility for labs that need mobile storage rather than fixed cabinetry.

Better support for pathology, histology, teaching, and archives

The brochure positions the ToronSTC™ series for pathology labs, histology labs, teaching departments, research settings, and archive support. That broad fit makes the range useful for both active daily slide handling and longer-term organized storage.

Easy tray identification

The ToronSTC™ 1000 includes a digital label area on each tray layer to support easier archiving and faster identification of stored material. This is especially useful in larger slide collections where retrieval speed matters.
