

TORONTECH

ASPHALT TESTING EQUIPMENT

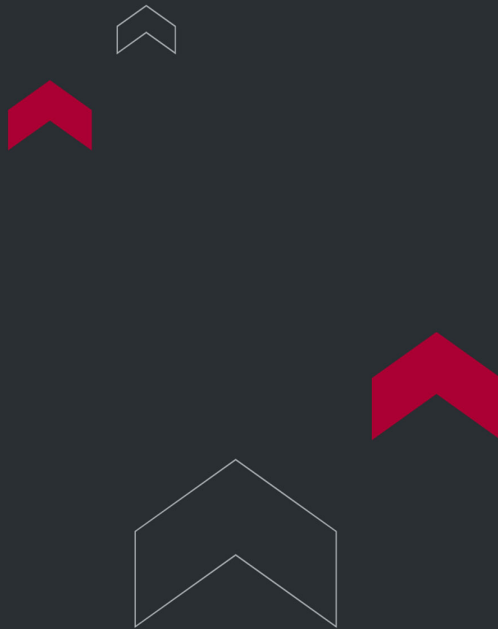

Precision Instruments for Every Stage of Asphalt & Bituminous Material Testing

Every highway, every runway, every city street that carries the weight of modern life starts with one essential question: will the asphalt hold up? Torontech Asphalt Testing Equipment delivers the answer with uncompromising precision. Designed for asphalt producers, highway authorities, paving contractors, and quality-control laboratories worldwide, our comprehensive range puts accurate, reliable, standards-compliant testing directly in your hands — so the roads you build today carry traffic safely for decades to come.

Asphalt testing is the science behind every smooth, durable pavement, covering the full lifecycle from raw bitumen to finished mixture. Torontech equipment proves performance across every critical parameter. Our portfolio includes Marshall stability testers and Hveem stabilometers that measure mix strength and deformation resistance; penetrometers, softening point apparatus, ductility testers, and flash & fire point devices that characterize binder consistency; rolling thin-film and thin-film oven testers that simulate aging; viscometers for absolute and kinematic viscosity; specific-gravity and density apparatus; centrifuge and ignition extractors that quantify binder content; gyratory and Superpave compactors that mold realistic specimens; wheel-tracking and rutting testers that predict pavement performance under traffic; plus core drills, sieve shakers, slurry seal testers, and asphalt-content ovens that complete the workflow from sample to certified report. Whatever the standard — ASTM, AASHTO, EN, ISO, or BS — Torontech has the instrument engineered to meet it.

What sets Torontech apart is the perfect balance of laboratory-grade accuracy, rugged industrial durability, and exceptional value. Each instrument is built to deliver repeatable, defensible results test after test, year after year — backed by intuitive operation, robust construction, and the long-term reliability that busy asphalt plants, road authorities, and materials laboratories demand. Whether you are running production QC at a hot-mix asphalt plant, certifying paving materials for a major highway project, or advancing pavement engineering in a research institute, Torontech equips you with the precision tools to measure what matters.

Behind every kilometer of safe, smooth, long-lasting road is a laboratory that got it right — and behind those laboratories, you'll find Torontech. Trusted by contractors, government agencies, and research institutions in more than 80 countries, Torontech is more than a supplier of testing equipment: we are a partner committed to the durability, safety, and
